↻ Redirects

✖ 0

⚠ 1

Description

Misconfigured redirects can lead to incorrect locations. This can confuse users, ruin their experience, increase the number of HTTP requests to your website, and result in a traffic drop and crawling budget decline. The checks in this section help you maintain control over your redirects and pinpoint room for improvement related to them.

ISSUES

FIXED

⚠ 3XX HTTP status code

1

0

0

<https://www.plumbersthatcare.com/hydro-jetting-drainage-solutions>

Issue description

The pages indicated in the report return a 3XX response code, meaning that a redirect is set up from such pages. The 3XX response code in itself is not a problem, but each redirect puts an additional load on the server, so it's better to remove unnecessary internal redirects.

How to fix

Make sure that the number of 3XX pages on your website does not exceed 5% of the total number of pages. If their number exceeds 10%, then you have a critical problem, and you should immediately remove some of the redirects.

📄 Sitemap

✖ 1 ▲1

⚠ 1 ▲1

Description

A sitemap is a file that contains a list of all the URLs on a website that crawlers should be aware of. It must be free of irrelevant or invalid URLs to prevent it from hurting your crawl budget. The checks in this section help ensure your sitemap remains in place and error-free.

ISSUES

PAGES

NEW

FIXED

⚠ 3XX redirects in XML sitemap

1

0

0

<https://www.plumbersthatcare.com/hydro-jetting-drainage-solutions>

Issue description

The XML sitemap contains URLs that redirect visitors from one page to another via 3XX redirects, which, in turn, can drain the crawl budget and lead to website indexing issues.

How to fix

Replace redirecting URLs in the XML sitemap with destination URLs. If a destination URL is already in the XML sitemap, you should delete URLs with 3XX redirects from the XML sitemap.

✖ Non-canonical pages in XML sitemap

1 ▲1

1

0

<https://www.plumbersthatcare.com/shop>

ISSUES	PAGES	NEW	FIXED
Issue description <i>Non-canonical pages have been found in the XML sitemap file. All pages listed in the sitemap should be suggested as canonicals for search engines.</i>	How to fix <i>Make sure your XML sitemap only contains canonical URLs.</i>		

Meta Tags

8  1871  187

Description

Meta tags reveal important information to search engines about your page, including its relevance to the user's search query. The checks in this section help ensure that your meta tags are in place. They also highlight potential areas for improvement.

Issue description <i>Search engines can use the description meta tag to generate descriptions for snippets, but they may shorten it to a length they deem acceptable. For this reason, it's important that the page description is clear and concise, and defines the page's topic.</i>		How to fix <i>The general recommendation is to keep your page description length up to 158 characters, although Google can sometimes display longer snippets.</i>		
 Content		 0  2  195		
Description				

Content is the core of your SEO efforts and results. This section contains the most popular checks related to the technical health of your website's content.

ISSUES	PAGES	NEW	FIXED
 H1 tag missing	1  194	1	195
https://www.plumbersthatcare.com/src/main.tsx			
Issue description <i>The <h1> tag is the top-level page heading, which is the most important <h> tag. People usually see the <h1> tag as the title of the text, and search engines use it to understand what the page is about. Keep in mind that from the SEO perspective, the <h1> tag is the second most important tag after the <title> tag.</i>	How to fix <i>Make sure all of your web pages have a unique <h1> header tag. Depending on the website type and page structure, there may be more than one <h1> tag, but it is highly recommended to use only one <h1> tag per page. The key thing to keep in mind here is that your pages need to be logically structured.</i>		
 Duplicate H1	2  2	2	0
https://www.plumbersthatcare.com/commercial-plumbing https://www.plumbersthatcare.com/commercial-services			
Issue description <i>Duplicate <h1> headings on different pages prevent search engines from understanding which site page is relevant to a particular search query. Pages with duplicate header tags are less likely to rank well, as they can confuse search engines about the page topic.</i>	How to fix <i>Write a unique <h1> for each page on your site, adding a clear description of the content on the page.</i>		
 Image too big	1  1	1	0
https://www.plumbersthatcare.com/claras-story			
Issue description <i>This issue is triggered if the images you use on your website are too large. Images are usually the "heaviest" page elements in terms of size, and if the page loads slowly, in most cases, it is because of the size of the images.</i>	How to fix <i>Check to see if the images indicated in the report can be optimized. Try reducing the size of the images without losing their quality.</i>		

Links

 166 29

 0

Description

Internal links help search engine crawlers discover new web pages and ensure link equity distribution across the website. External links help support ideas and facts expressed in content with data from external sources. Both are indispensable components for a good user experience. However, they can ruin it if they don't work properly. This section checks whether the links on your website work correctly. It also suggests improvements if it discovers any issues.

Issue description <i>Some pages of the website don't have any internal links pointing to them. Search engines can only find and index such pages if they are indicated in the XML sitemap or via external links. Your website visitors cannot access such pages from other pages of the site.</i>		How to fix <i>Check your website's internal linking and ensure that visitors and search robots can easily access every important page.</i>		
 External links to 3XX		2  2	2	0
https://www.plumbersthatcare.com/store				
https://www.plumbersthatcare.com/shop				
Issue description <i>Some pages that you link out to from your website redirect visitors to a completely different page. Perhaps the redirect was set up after you linked out to the website, and now the link can lead visitors to another page that does not contain the information they need.</i>		How to fix <i>Manually look through every external 3XX link and make sure that redirected pages contain the necessary information. If there information is there, replace the link with the new version of the URL. If the required information is not available, replace or delete the link.</i>		
 External links missing anchor		2  2	2	0
https://www.plumbersthatcare.com/store				
https://www.plumbersthatcare.com/shop				
Issue description <i>Some external links on your website have an empty or naked anchor (i.e., anchor that uses a raw URL), or the anchor text only contains symbols. When clicking on links without anchors, it may be difficult for both website visitors and search engines to understand what to expect to see on the page that you link out to.</i>		How to fix <i>Review the links indicated in the report and, if necessary, add anchor texts or descriptive in-copy text around the link. Aim to use concise phrasing in anchor texts.</i>
