Crawling & Indexing

✖ 45

⚠ 0

Description

Your website's pages must first be properly crawled and indexed to appear in search engine results. This section contains checks for main factors that can affect search engine crawlers' scanning and indexing of your site.

ISSUES	PAGES	NEW	FIXED
✖ 4XX HTTP Status Codes https://www.plumbersthatcare.com/commercial/+15123689159 https://www.plumbersthatcare.com/blog/+15123689159	2	0	0
Issue description <i>4XX HTTP status codes indicate that the requested page or resource cannot be accessed. 4XX URLs provide a poor user experience for the site's visitors because they cannot access the page or file via the link they clicked on. Moreover, internal links to 4XX URLs drain your crawl budget. Pages of your website that changed their response code to 4XX will be removed from search engine indexes.</i> How to fix <i>Review the list of 4XX URLs and analyze every internal page that's linked to a 4XX URL. Remove such broken links or replace them with appropriate links to live and accessible pages. Moreover, you can set up 301 redirects when moving or deleting the site's pages to avoid having 4XX errors. The HTTP response code 429 (Too Many Requests) may indicate that the crawl rate specified under the crawl settings for your project is too high for the web server to handle. Decrease it via the settings (Limits and restrictions) and rescan the project.</i>			
✖ Canonical URL with a 3XX Status Code https://www.plumbersthatcare.com/water-heater-services https://www.plumbersthatcare.com/drain-cleaning https://www.plumbersthatcare.com/leak-repair https://www.plumbersthatcare.com/commercial-plumbing https://www.plumbersthatcare.com/service-areas https://www.plumbersthatcare.com/water-heater-calculator https://www.plumbersthatcare.com/plumbing-cost-estimator https://www.plumbersthatcare.com/gas-line-services https://www.plumbersthatcare.com/backflow https://www.plumbersthatcare.com/about https://www.plumbersthatcare.com/blog https://www.plumbersthatcare.com/success-stories https://www.plumbersthatcare.com/customer-portal https://www.plumbersthatcare.com/store https://www.plumbersthatcare.com/contact https://www.plumbersthatcare.com/faq https://www.plumbersthatcare.com/+15123689159 https://www.plumbersthatcare.com/mastering-pipe-installation-austin-marble-falls https://www.plumbersthatcare.com/url https://www.plumbersthatcare.com/protect-austin-home-floodstop-prevents-backflow	41 ▼2	1	3

Issue description <i>A web page specified as canonical, returns a 3XX response code.</i>	How to fix <i>Analyze the list of canonical URL pages that point out to redirected pages. Replace canonical URLs containing redirects with 200 OK pages that you want to get indexed and be displayed in the SERPs.</i>		
✖ Canonical chain https://www.plumbersthatcare.com/gas-leak-detection https://www.plumbersthatcare.com/water-leak-repair	2 ▲2	2	0
Issue description <i>Pages specified as canonical—as in those that are in priority—have a 'rel=canonical' link to a different page. This creates a so-called "canonical chain", where Page A links to Page B as canonical, and in turn, Page B links to Page C from its 'rel=canonical' elements.</i>	How to fix <i>Avoid using canonical chains, despite the fact that search engines claim they can scan them without any problems. So that search engine bots aren't confused, point to a single canonical page where possible. That is, you need to replace non-canonical links with direct links to canonical ones. For example, Page A will directly link to Page C as canonical, bypassing Page B.</i>		
! Blocked by noindex https://www.plumbersthatcare.com/refund_returns	1	0	0

ISSUES	PAGES	NEW	FIXED
Issue description			
<p>The noindex directive in the <head> section of the page's HTML code prevents search engines from displaying the page in the search results. If the page uses the noindex directive, search engines will not rank the page, even if other websites link out to it.</p>			
!	Blocked bynofollow	1	0
https://www.plumbersthatcare.com/refund_returns			
Issue description			
<p>Thenofollow attribute in the <head> section of the page's HTML code prevents search engines from clicking on all links on this page.</p>			
How to fix			
<p>Only use this directive on pages that you don't want to appear in the search results. Make sure these pages are not blocked by the robots.txt file. Otherwise, search engine bots will not be able to see the noindex directive, and if other websites link out to these pages, they can appear in the search results.</p>			

ISSUES	PAGES	NEW	FIXED
_REDIRECTS			
Description			
<p>Misconfigured redirects can lead to incorrect locations. This can confuse users, ruin their experience, increase the number of HTTP requests to your website, and result in a traffic drop and crawling budget decline. The checks in this section help you maintain control over your redirects and pinpoint room for improvement related to them.</p>			
✖ Redirect to 4xx or 5xx	2	0	0
https://plumbersthatcare.com/commercial/+15123689159			
https://plumbersthatcare.com/blog/+15123689159			
Issue description			
<p>Redirect landing pages return a 4XX or 5XX response code. These pages were either deleted or are inaccessible due to server problems. As a result, search engine robots are not able to crawl such pages, and visitors who see an error in the browser will most likely leave your site.</p>			
How to fix			
<p>Replace the target redirect page address with the relevant one if the page returns a 4XX response code. A 5XX response code indicates that there's a problem with the site's web server. The error may be temporary and mean that technical work was carried out on your server during the crawl. Check the web server error log, and if server problems occur regularly, identify the cause and fix it.</p>			
✖ Redirect chain	2	2	0
https://plumbersthatcare.com/%2B15123689159			
https://plumbersthatcare.com/%2B18304603565			

ISSUES	PAGES	NEW	FIXED
Issue description			
How to fix			

ISSUES	PAGES	NEW	FIXED
<p>Redirect chains occur when a redirect is set up from page 1 to page 2, and from page 2 to page 3. There may be more than three links in a chain, but the longer the path to the target page is, the slower the page will load. Redirect chains negatively affect the user experience, and also complicate the crawling process for search engine robots.</p>

Issue description

The pages indicated in the report return a 3XX response code, meaning that a redirect is set up from such pages. The 3XX response code in itself is not a problem, but each redirect puts an additional load on the server, so it's better to remove unnecessary internal redirects.

How to fix

Make sure that the number of 3XX pages on your website does not exceed 5% of the total number of pages. If their number exceeds 10%, then you have a critical problem, and you should immediately remove some of the redirects.

Sitemap

✖ 6 ▼6

⚠ 62 ▼6

Description

A sitemap is a file that contains a list of all the URLs on a website that crawlers should be aware of. It must be free of irrelevant or invalid URLs to prevent it from hurting your crawl budget. The checks in this section help ensure your sitemap remains in place and error-free.

ISSUES	PAGES	NEW	FIXED

Issue description

The XML sitemap contains URLs that redirect visitors from one page to another via 3XX redirects, which, in turn, can drain the crawl budget and lead to website indexing issues.

How to fix

Replace redirecting URLs in the XML sitemap with destination URLs. If a destination URL is already in the XML sitemap, you should delete URLs with 3XX redirects from the XML sitemap.

Issue description

HTTP response compression is not enabled on your website. Compressing JavaScript files significantly reduces their size as well as the overall size of your web page, improving the page load time as a result. Uncompressed JavaScript files make your web page load slower, which has a negative impact on the user experience and search engine rankings.

How to fix

Configure server-side JavaScript compression. If you use uncompressed JavaScript files from an external resource, make sure that they do not slow down your page load time. Otherwise, contact the owner of the resource where the JavaScript files are stored with a request to configure compression.

🔗 Links

✖ 16 ▼5

⚠ 14 ▼5

Description

Internal links help search engine crawlers discover new web pages and ensure link equity distribution across the website. External links help support ideas and facts expressed in content with data from external sources. Both are indispensable components for a good user experience. However, they can ruin it if they don't work properly. This section checks whether the links on your website work correctly. It also suggests improvements if it discovers any issues.

Issue description Some pages of your website have only one internal link pointing to it. Internal links increase the importance of the page from the perspective of search engines.	How to fix Make sure that your website's most important pages have at least a couple of internal links linking out to them. All internal links must pass link juice, as in not being tagged with the rel="nofollow" attribute.

Issue description

Some pages that you link out to from your website redirect visitors to a completely different page. Perhaps the redirect was set up after you linked out to the website, and now the link can lead visitors to another page that does not contain the information they need.

How to fix

Manually look through every external 3XX link and make sure that redirected pages contain the necessary information. If there information is there, replace the link with the new version of the URL. If the required information is not available, replace or delete the link.
